

An ink for an ink jet includes a coloring composition comprising a dispersion medium and coloring particulates containing an oil-soluble dye represented by formula (1) and a polymer selected from the group consisting of polyurethanes, polyesters, polyamides, polyureas and polycarbonates. The formula (1) satisfies at least one of following (i) to (v): (i) A represents –NR<sup>4</sup>R<sup>5</sup>, R<sup>4</sup> and R<sup>5</sup> each represents independently a C<sub>1-18</sub> alkyl group having a substituent group; (ii) At least one of R<sup>2</sup> and R<sup>7</sup> represents a substituted alkyl group; (iii) R<sup>8</sup> represents an aryl group having two or more substituent groups; (iv) Two or more substituent groups represented by –NR<sup>170</sup>SO<sub>2</sub>R<sup>171</sup> are present in the molecule; and (v) One or more carboxyl groups are present in the molecule.

## Formula (1)
